

Problem solving with fractions and ratios

- 1 In this list of common metric units of length which one is missing? millimetre, centimetre, metre, kilometre. Fill in the blank
- 2 1 km = 1000 m, 1 m = 100 cm. What is 5 400 000 cm in kilometres? Tick **1** correct answer
- ☐ 5400 km
- ☐ 540 km
- ☒ 54 km
- ☐ 5.4 km
- ☐ 0.54 km
- 3 The scale on a map is 1:5 000 000. The distance between two places on the map is 5 cm. What is the distance in real life in kilometres? Tick **1** correct answer
- ☐ 2.5 km
- ☐ 25 km
- ☒ 250 km
- ☐ 2500 km
- ☐ 25 000 km
- 4 The scale on a map is 1:500 000. The distance between two places is 86 km. What is the distance on the map? Tick **1** correct answer
- ☒ 17.2 cm
- ☐ 172 cm
- ☐ 17.2 km
- ☐ 172 m
- 5 The length of a pencil is 2.5 inches. Convert this into centimetres given that 1 inch = 2.54 cm. Fill in the blank

6.35 cm

- 6 The distance between London and Manchester is 200 miles. Convert this into kilometres given that 5 miles = 8 km. Fill in the blank

320 km
