

Equivalent multiplicative relationships

Task A: Equivalent ratios

1) Tick which ratio tables are equivalent to the statement:

“For every 3 ticks, there are 4 crosses.”

Ticks	Crosses
3	4

Ticks	Crosses
6	9

Ticks	Crosses
1.5	2

Ticks	Crosses
15	20

Ticks	Crosses
9	12

Ticks	Crosses
4	5

2) Pair the equivalent function machines, left to right, and identify the multiplier.

Task A: Equivalent ratios

3a) Shade in to make the letter “L” using the ratio:

3 shaded to 1 unshaded.

b) Shade in to make the letter “H” using the ratio:

12 shaded to 13 unshaded.

c) Shade in to make the letter “C” using the ratio:

1 shaded to 1 unshaded.

4) Identify the multipliers and missing numbers for the following function machines.

Task B: Using equivalent ratios

1) Using the ratio table, fill in the blanks.

a)

Stars	Hearts	Total
2	3	
		50

For every stars, there are hearts.

is the fraction of stars.

When there are 50 shapes, there are 20 stars and 30 hearts

b)

Boys	Girls	Total
6	5	
		88

For every boys, there are girls.

is the fraction of girls.

When there are 88 pupils, there are boys and girls.

2) To make screed, the ratio of sand to cement is for every 1 kg of sand, use 4 kg of cement.

a) Show this in a ratio table.

b) Andeep needs 15kg in total. How many kg of sand will he need?

c) What fraction of the screed is sand?

Task B: Using equivalent ratios

3) Jacob spilt ink all over the maths question and his working out, but he correctly shaded in the grid. Work out the maths questions and working out.

For every  shaded there are  unshaded

The fraction that is shaded is 

Using 36 squares,  = $\frac{\text{ink blot}}{36}$

I need to shade in  squares.

4) The ratio of the three different panels of fencing are:

Panel length A $\times$ 1.5 = panel length B

Panel length A $\times$ 2 = panel length C

The total length of the fencing is 36 cm. Work out the length of each panel.
