

Multiplicative relationships and direct proportion

- Two variables are in direct proportion if they have a constant multiplicative relationship. Fill in the blank
- Which of the following show a directly proportional relationship between A and B? Tick 2 correct answers

A	B
4	32
7	56
11	88

A	B
7	13
10	19
13	25

A	B
2	5
4	9
6	13

A	B
6	2
24	8
39	13

- A and B are directly proportional. The missing value of B is 11. Fill in the blank

A	B
15	3
55	

- A and B are directly proportional. The missing value of B is 7.5. Fill in the blank

A	B
2	3
5	

- 5 The graph shows the relationship between cost and number of boxes bought. Can you spend exactly £5 on boxes? Tick **1** correct answer

- ☐ No, reading off the graph at £5 shows you can buy between 2 and 3 boxes.
- ☒ Yes, reading off the graph at £5 shows you can buy exactly 2 boxes.

- 6 This graph shows that A and B are in direct proportion. The proportional relationship between A and B is $B = A \times \underline{0.5}$. Fill in the blank
