

Finding the original amount after a decrease

Task A: Finding the original value

1) Using your preferred method, answer the following questions. Give your answers to an appropriate degree of accuracy.

- a) A t-shirt costs £21 in a sale offering a 25% discount.
What is the cost of the t-shirt before the discount?

- b) A car's value depreciates by 22% in the first year. It is now worth £11 544.
What was the cost of the car originally?

- c) A packet of crisps contains 33% less fat. This low fat packet contains 5.3 g of fat.
How much fat is in a regular packet?

Task B: Using a multiplier

- 1) Given the new amount and percentage decrease, find the original amount. All of the answers are in the grid except for one.

Write a percentage question that gives this answer.

#	Percentage Decrease	New Amount
a	10%	315
b	15%	289
c	45%	176
d	12%	306.24
e	36%	245.76
f	80%	73.6
g	12.5%	288.75
h	3.6%	303.66
i		

320	384	340
315	325	350
368	330	348

Task C: Mixed reverse percentage problems

- 1) Decide whether each of the following questions indicate a decrease or increase question.
 - a) A watch is sold for £46.80, this was a loss of 35%.
 - b) A bag of apples contains an extra 25% free. The bag contains 20 apples.
 - c) The value of a motorbike depreciates by 20%. It is now worth £6820.
 - d) A savings account earns 2.2% interest. The account now contains £613.20
 - e) You buy a laptop for £244.40, this price has been discounted by 6%.
- 2) Using your preferred method, find the original amounts in the following questions.
 - a) A watch is sold for £46.80. This was a loss of 35%.
 - b) A bag of apples contains an extra 25% free. The bag contains 20 apples.
 - c) The value of a motorbike depreciates by 20%. It is now worth £6820
 - d) A savings account earns 2.2% interest. The account now contains £613.20
 - e) You buy a laptop for £244.40. This price has been discounted by 6%.
