

Finding the original amount after an increase

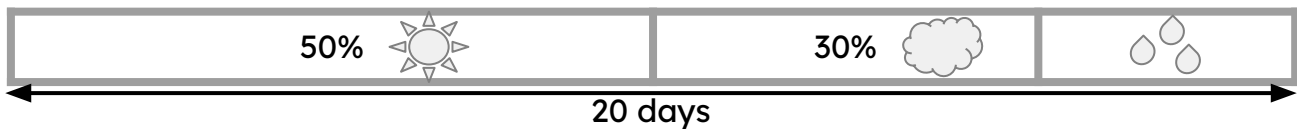

Task A: Finding the original value

- 1) Four friends live in different places. They draw bars to show the percentage of days that they experienced different weather.

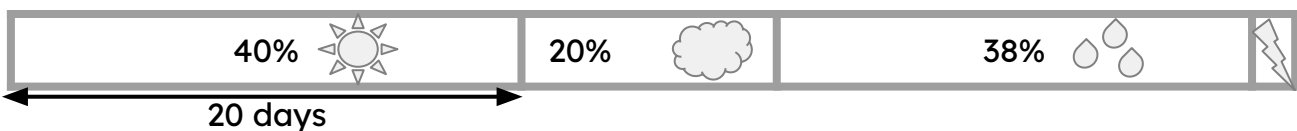

Work out how many days were sunny, cloudy, rainy or stormy for each person.

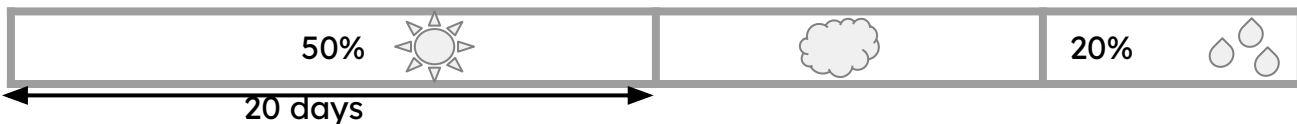

Alex

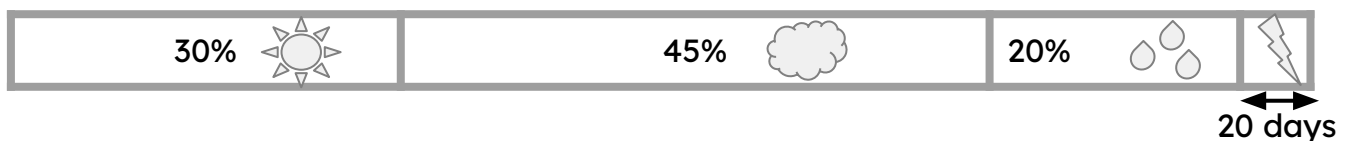

Sofia

Lucas

Jun

£66

£36.80

£9360

- 2) Find the original cost for each of these items, given that:

- The price of the trainers has increased by 10%.
- The price of the sunglasses has increased by 15%.
- The price of the car has increased by 17%.

Task B: Using a multiplier

- 1) Given the new amount and percentage increase find the original amount. All of the answers are in the grid except for one.

For i) Write a percentage question that gives this answer.

	Percentage Increase	New Amount
a	10%	357.5
b	15%	368
c	45%	493
d	12%	412.16
e	36%	522.24
f	80%	630
g	12.5%	391.5
h	3.6%	326.34
i		

320	384	340
315	325	350
368	330	348

- 2) Complete this statement in several different ways.

a) Increase £_____ by _____% = £80

b) Increase £_____ by _____% = £250

- 3) Try to use the multiplier method to answer the following:

a) A social media manager earns £34 980 a year.

This includes a pay rise of 6%.

What was their wage before the pay rise?

b) The cost of a concert ticket is £89.60

This includes an increase of 28% on the previous year.

What was the cost of the ticket last year?
